## Plenary Session 1:

Addressing Energy Security and Justice Challenges in Turbulent Times

**Background Paper** 

## Disclaimer

The observations presented herein are meant as background for the dialogue at the 9th Asian Ministerial Energy Roundtable. They have been prepared in collaboration with Boston Consulting Group and should not be interpreted as the opinion of the International Energy Forum or Boston Consulting Group on any given subject.

## Contents

Role energy has played in achieving socio-economic benefits

Asia has become center of global market growth

Asia's crucial role in energy transition

Key questions and discussions

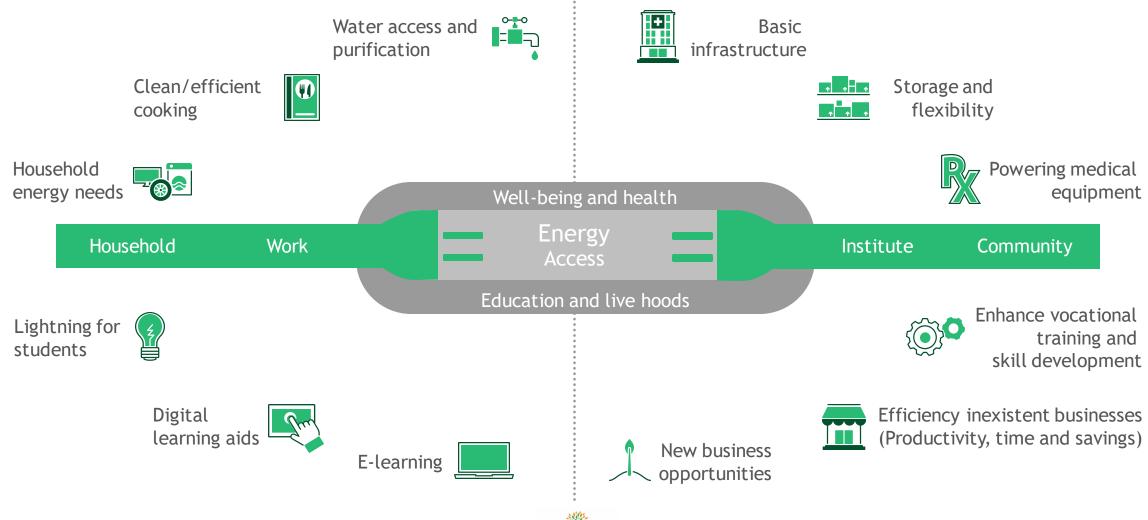

## Contents

Role energy has played in achieving socio-economic benefits

- 2 Recent global trends in energy space
- Asia has become center of global market growth
- Asia's crucial role in energy transition
- Key questions and discussions

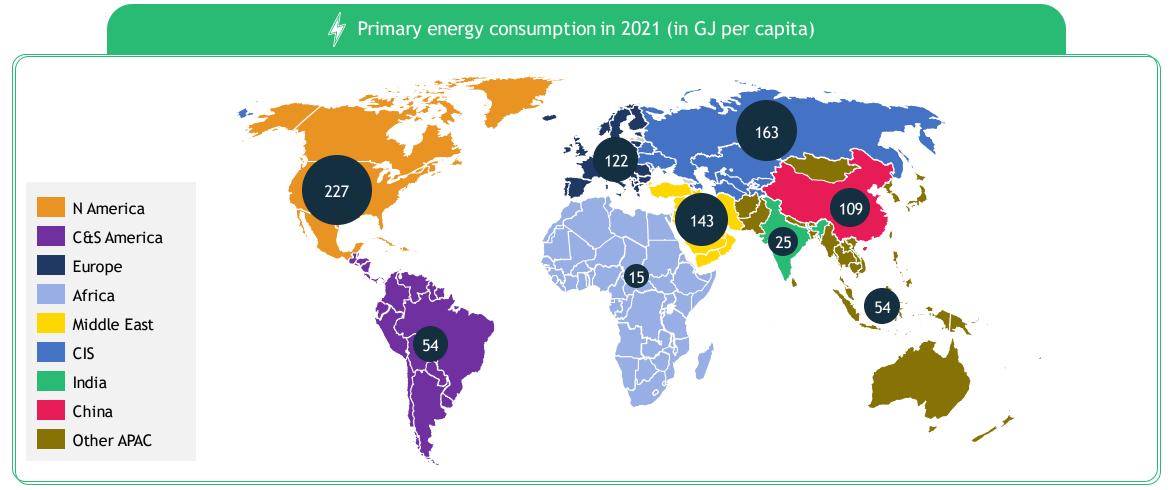

## Energy Access brings a number of benefits to the society

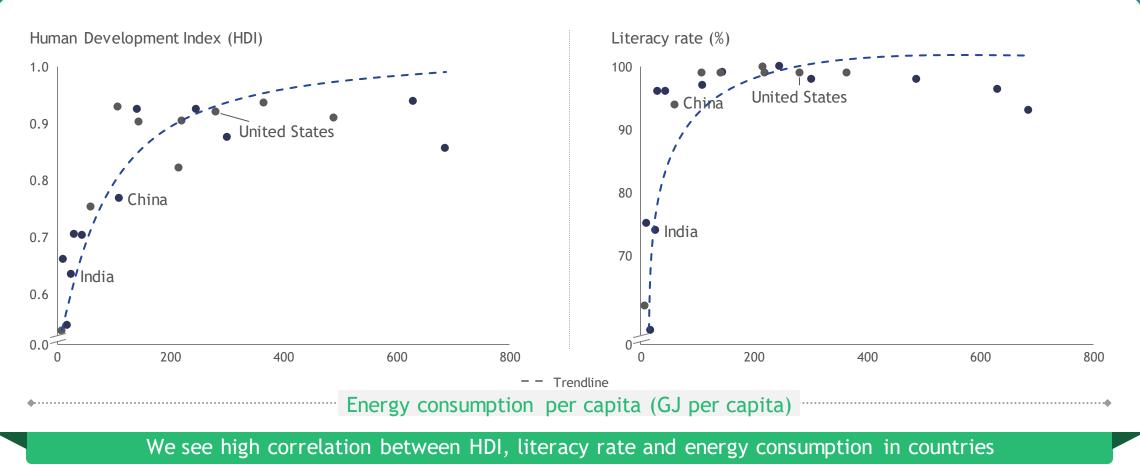

### Globally, large variation in per capita energy consumption observed with Asian countries in lower end of spectrum

Source: Natural Earth Country boundaries without large lakes; Natural Earth Country breakaway and disputed areas, BP Energy Outlook, BP Energy Statistics 2022, UN

# Access to energy plays a critical role in improving socio-economic standards

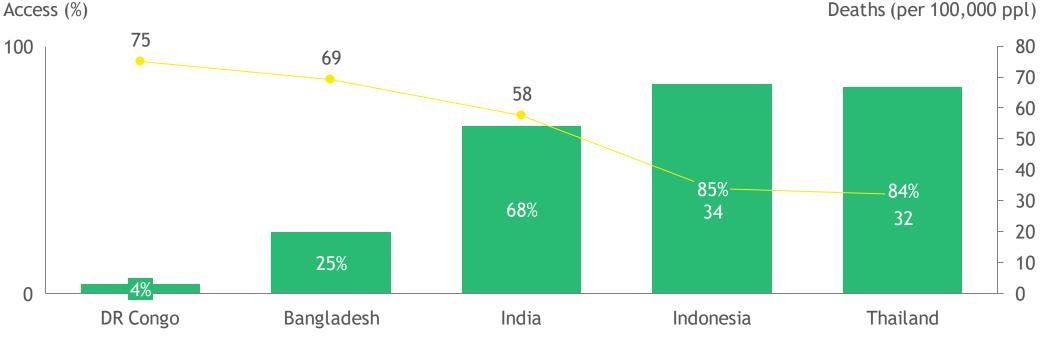

Source: OECD, World Bank, IMF, BP Statistics Review 2022

Note: HDI - Measures the average achievements in a country in three basic dimensions of human development: a long and healthy life, access to knowledge and a decent standard of living.

### Access to clean cooking fuel improves the quality of life by reducing health hazards

Lower number of pre-mature deaths from household air pollution in countries with higher access to clean cooking fuel (2021)

Deaths (per 100,000 ppl)

Access to clean cooking fuel

Premature deaths from household air pollution (per 100,000 people)

Source: World Bank Report 2021

Note: Clean cooking fuel include LPG, electricity, natural gas, biogas, solar power; Unclean cooking fuel include kerosene, charcoal, agricultural residue

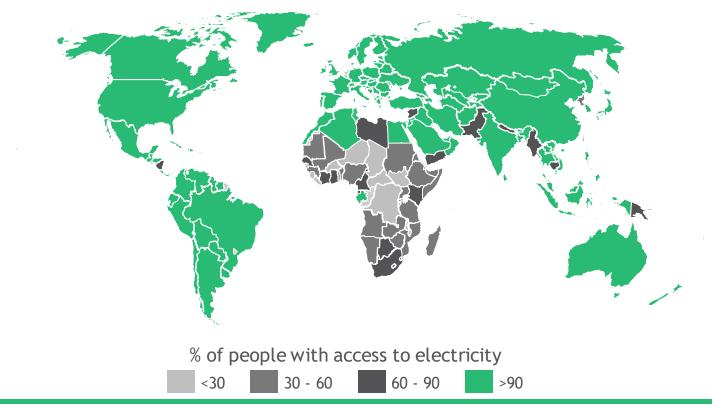

## Yet, 10% of global population without access to electricity

#### Electricity access situation, 2020

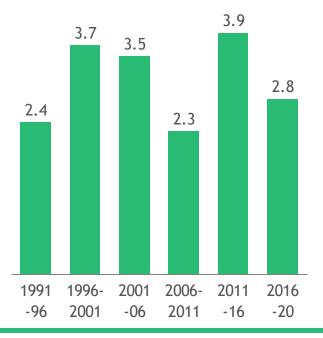

Change in electrification rate (% points)

Sources: Natural Earth Country boundaries without large lakes; Natural Earth Country breakaway and disputed areas, World Bank

## Contents

Role energy has played in achieving socio-economic benefits

Recent global trends in energy space

Asia has become center of global market growth

Asia's crucial role in energy transition

Key questions and discussions

Historically high crude, gas prices & inflation

Trade flow & supply chain

Decarbonization

**4** Electrification of energy demand

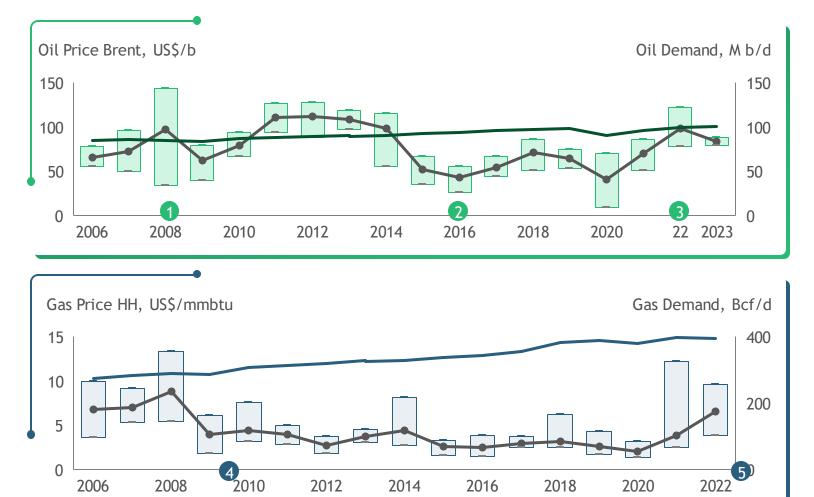

Lack of investment in energy sector

Digitization & creating new ecosystems

h

## Both oil and gas recorded historically high price levels in 2022

1 Great Financial Crisis Crude prices down from record highs

2 Oil Price Collapse OPEC maintains output in face of shale growth

3

**Covid** Demand contraction (~10% in 2020) leads to rapid price drop

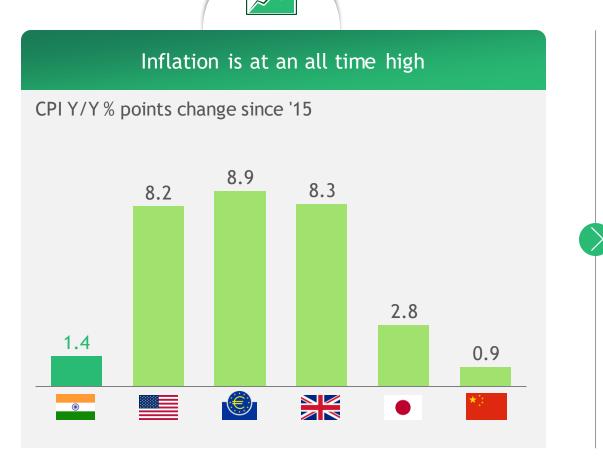

(4) Shale gas revolution Development of Marcellus & other plays transforms US gas market

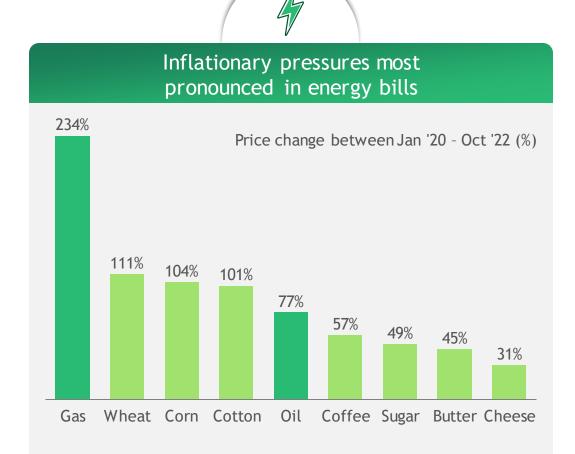

5 European Gas Shortage Less Russian gas, tight LNG markets & lower wind output

- Max - Average - Min - Oil Demand, M b/d - Gas Demand, Bcf/d

### High prices translating into increasing pressure on consumers

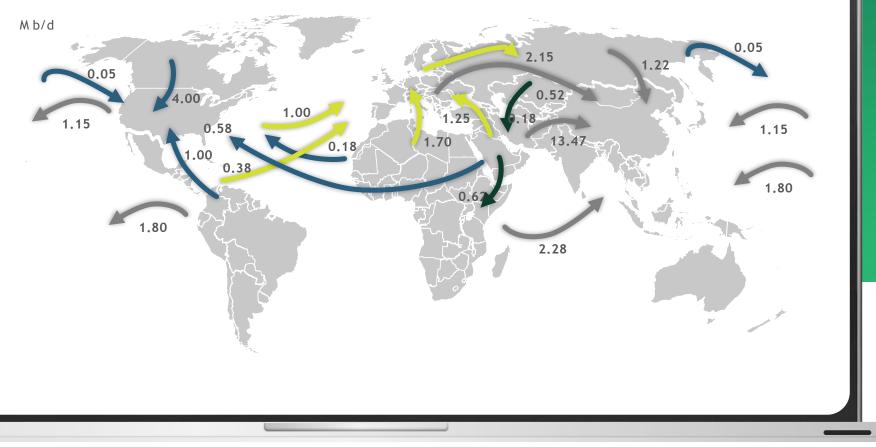

1. Direct debit, national average. Typical domestic consumption values=2.900 kWh for electricity, 12,000 kWh for gas Source: Ofgem; Cornwall; Morningstar, OECD Inflation (CPI) growth rate (Q3 '15 - Q3 '22 Comparison); Bloomberg commodity index 3-month forward; Gov.UK, BCG

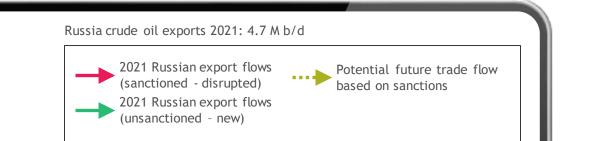

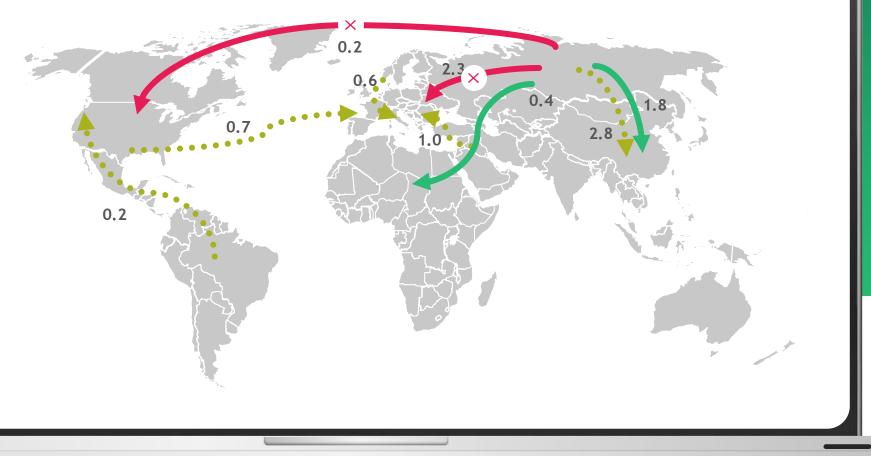

### Global crude oil flows -2020

Note: Reflects major net waterborne trade flows of greater than 0.05 M b/d for full year 2020 Source: Eikon; BCG analysis

Recent global events have disrupted previously established global crude oil flows

Carbon Intensity: Volume-weighted average Cl (gCO2e MJ-1); 2. Only included crude oil trade flow lines specific to Russia and Europe Source: S&P Global Platts, Company filings

## Power, industry, transportation and building account for almost 70% of GHG emissions are the main topics of today agenda

Gt CO2e of global GHG emissions by sector, Scope 1, 2021

28%	<b>% of GHG emissions</b> 25%	15%	12%	8%	12%
Oil	Chemicals	Rail Shipping	Rice	Cooking	
Gas	Oil & gas	Air		Hot water Other (esp. cooling)	Waste
	Iron & steel	Heavy road	Farming	Other	Other
Coal	Cement				Fugitive
	Other	Light road	Cattle	Space heat	
Power	Industry	Transport	Agriculture	Buildings	Other

Source: EDGAR 7.0; IEA; BCG Analysis

### Four main forces will drive decarbonization

#### Policy Agenda

Global steering towards sustainability sufficiently guarantees market perspectives in Green Energy for the next years

 Ambitious INDC<sup>1</sup> targets with still further development ahead for countries

Several regulators shifting towards a more activist role (i.e. air quality regulation)

#### Customer expectations

Expectation on competitive and green energy sourcing (i.e. heating)

Preparing for the electrification of transportation (EV)

More empowered consumer with Distributed Energy Resources onsite

Concerned about the impact of industry and transportation in the environment

#### Investor push

Capital markets increasingly building emissions risks into asset prices, and venture capital investments in transition technologies are accelerating

Large energy companies directing ~\$1T to low carbon in next 5 years

Need of pairing low carbon energy investment with identified & contracted demand

#### **Technology Advancements**

Reduced cost of capture technology

Reduced cost of CO2 conversion technology and provide CCS as a service

Improved storage technology

Push for alternate fuel vehicles

Leveraging CO2 EOR capabilities by O&G players

1. Intended Nationally Determined Contributions

Sources: S&P Capital IQ; S&P Global consensus view to operating income and dividends

# Global electricity demand growing ~2x times faster than total energy demand

#### Others Natural Gas Oil Electricity CAGR 1% CAGR ('21-'50) 544 485 127 439 118 115 81 0.4% 77 72 185 0.4% 183 166 151 1.9% 107 87 2021 2030 2050 % of electricity/ 20% 22% 28% final demand

Final energy demand (EJ, 2021-2050)

#### Drivers for growth in electricity demand

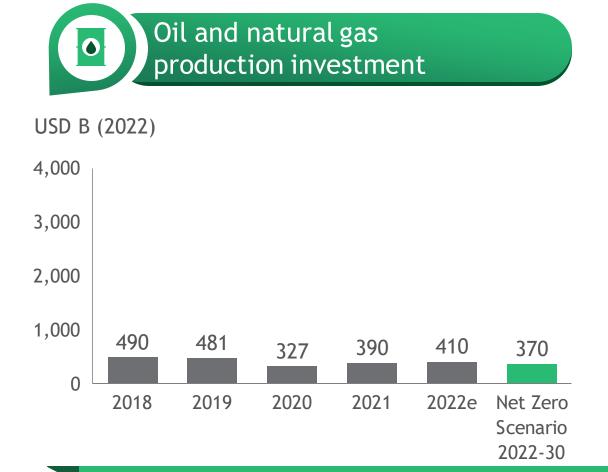

Energy efficiency to reduce electricity demand, but outgrown by growth levers

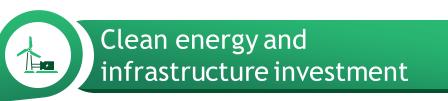

- Shifts in fossil fuels heat systems to electric powered systems
- EV penetration
- Electrification of rural areas

Source: IEA WEO 2022, Stated Policies Scenario (more conservative); IEA Digitalization & Energy report

# Step-up in clean energy investment required to meet net zero targets

Total USD 1816.9B increased investment in the energy landscape (2022-2030)

## Digitization can help unlock potential across the value chain

Exploration	Field development	Drilling <sup>1</sup>	Operations/Production		
Accelerate interpretation with machine learning	Fully optimize field architecture with smart and integrated modeling	Faster well delivery with closed loop automation	Optimize production with real time data and advanced models enabled by IIoT <sup>3</sup>		
	Synchronize project build using Digital Twins and BIM <sup>2</sup>	Optimize well design using data analytics	Optimize uptime using predictive maintenance and Digital Twins		
	Optimize for constructability and cost				
50-60% reduction in interpretation time and cost	(up to) 70% reduction in engineering hours and higher value field concepts	20-30% Faster well delivery and more productive wells	3-5% Increased production <sup>4</sup> 20-40% Reduced maintenance cost		
1. Drilling covers E&A and Development/Infill Source: BCG project experience, BCG Analysis	drilling 2. Building Information Modeling 3. Ind	ustrial internet of things 4. Assuming marginal v	vale of US\$50 per additional bbl

## Contents

Role energy has played in achieving socio-economic benefits

2 Recent global trends in energy space

Asia has become center of global market growth

Asia's crucial role in energy transition

Key questions and discussions

## Key Questions

- 1. How can the Asian continent, the current energy demand center, protect and safeguards its interest of ensuring energy security and energy justice while supporting the energy transition?
- 2. What collaborative steps can be taken to increase the importance of the voice of developing economies in global energy markets?
- 3. Where can collaboration on energy security, and social justice be improved?
- 4. What initiatives with Asia will accelerate energy investment and carbon abatement?
- 5. How can public and private sector finance conditionalities accelerate just and orderly transitions?
